### DETAILED ACTION

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert W. Nelson on February 15, 2005.

The application has been amended as follows:

- a. Cancel claims 24-26.
- b. Rewrite claim 14 as following:
  - Claim 14: A method for reducing motion blur in an image, said method comprising: providing image data representative of said image; analyzing said image data to detect the presence of motion blur in said image; wherein analyzing said image data to calculate a first figure of merit of said digital image in a first direction; analyzing said image data to calculate a second figure of merit of said digital image in a second direction, said first and said second directions being substantially orthogonal; calculating a first ration of said first figure of merit to said second figure of merit, said ratio being the greater of said first or said second figure of merit divided by the lesser of said first or said second figure of merit; and comparing said first ration to a preselected value, wherein motion blur exists in said digital image if said first ratio is greater than said preselected value; and

processing said image data to increase edge acuity of said image in said direction of said motion blur. --

c. Cancel claim 15

d. Uncancel claim 16 and Rewrite it as following:

-- Claim 16: The method of claim 14, wherein said analyzing said image data to detect the direction of motion blur comprises determining the lowest value of said first and said second figures of merit, said lowest value corresponding to said direction of motion blur.--

***Allowable Subject Matter***

2. Claims 1-14, 16-23, 27 and 32 allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest a method for detecting motion blur in a digital image, said method comprising: providing image data representative of said digital image; analyzing said image data to calculate a first figure of merit of said digital image in a first direction; analyzing said image data to calculate a second figure of merit of said digital image in a second direction, said first and said second directions being substantially orthogonal; calculating a first ratio of said first figure of merit to said second figure of merit, said ratio being the greater of said first or second figure of merit divided by the lesser of said first or second figure of merit; and comparing said first ratio to a preselected value, wherein motion blur exists in said digital image if said first ratio is greater than said preselected value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments"
